

Price per person: €50.00 VAT (21%) NOT INCLUDED

Atlantic Copper is the largest copper producer in Spain and the third-largest copper smelter and refinery in Europe. It has more than one hundred years of experience in this market and it is based in Huelva. It is a subsidiary of the Freeport-McMoRan Group and its main activity is the processing of copper concentrate into high grade copper metal with some of the lowest production costs in the world. Its focus on innovation applied to all its process has allowed it to rank as one of the most efficient smelters in the world and pursue excellence in environmental performance and safety matters.

The visit to its facilities will start at the Copper Interpretation Centre opened by Atlantic Copper in early 2016. It shows that this metal is widely present in our everyday life, as well as its application in areas such as health, transport, new technologies and communication, construction and households, design or architecture. It is divided into four blocks: one on the History of Metallurgy and the major role played by copper in different times in history, underlying the strong links of the province of Huelva to metallurgy since thousands of years ago; another one explains with animations and real samples the copper production process in Atlantic Copper; the third one focuses on the uses and characteristics of this metal, and the fourth one is devoted to its social value and impact on sustainable development. After the tour of the exhibition area visitors will have the chance to discover first-hand and in detail the processes in the smelter and the refinery, always under strict safety measures.

IMPALA TERMINALS

Impala Terminals Huelva is a Logistic Centre for the reception, storage, blending and export of minerals and metal concentrates and other compatible bulk commodities. The facilities have been operating since January 2016 after a one-year construction period. It comprises two large covered warehouses with an area equivalent to 6 football fields and a 240,000 metric-ton warehouse static capacity. Ship loading and unloading takes place using two connected conveyor belt circuits, a ship loader, a port crane and an environmental-friendly hopper. The terminal carries out commodity sampling using a one-of-a-kind, state-of-the-art automated system developed jointly with local companies.

By implementing top-class safety, environmental and quality policies, Impala Terminals Huelva intends to become the main concentrate storage facility in Southern Europe.
